

IN THE CLAIMS

 Please amend the claims as follows:

Claim 1 (canceled)

Claim 2 (currently amended) A combination as defined in claim 9 [[1]],
including a cap for the cylindrical case, slidably received over an upper end of the
case.

Claim 3 (currently amended) A combination as defined in claim 9 [[1]],
in which a length of tape is adhesively attached to the container on opposite
sides of the recess.

Claim 4 (currently amended) A combination as defined in claim 9 [[1]],
in which the toothbrush has an elongated hollow body, a handle with a brush
receivable in said hollow body such that the handle is movable between a stored
position and an extended position; and
means for holding the handle in said extended position.

Claim 5 (canceled)

Claim 6 (currently amended) A combination as defined in claim 9 [[1]],
including a razor storable in said case.

Claim 7 (canceled)

Claim 8 (currently amended) A combination as defined in claim 10 ~~[[7]]~~, in which the body has resilient walls, and including a spout on the second cap for removing a liquid ~~legend~~ from said body when the second cap is mounted on the body.

Claim 9 (new) A combination bottle and toothbrush holder comprising:

an elongated body having a top opening and an outer symmetrical profile and an elongated integral recess, the recess having wall means forming a liquid-tight enclosure such that a liquid contained in the body will not pass through the recess of the bottle;

a cap threadably mounted on the top opening of the body;

a cylindrical case received in said recess;

a toothbrush and a tube of toothpaste received in the cylindrical case;

the case being receivable in the recess to a stored position in which the outside surface of the case forms a continuation of the profile of the body; and

means for releasably holding the case in the recess;

a combination as defined in claim 9, in which the container has a second recess, and the case has a finger resiliently received in said second recess.

Claim 10 (new) A combination bottle and toothbrush holder comprising:

an elongated body having a top opening and an outer symmetrical profile and an elongated integral recess, the recess having wall means forming a liquid-tight enclosure such that a liquid contained in the body will not pass through the recess of the bottle;

a cap threadably mounted on the top opening of the body;

a cylindrical case received in said recess;

a toothbrush and a tube of toothpaste received in the cylindrical case;

the case being receivable in the recess to a stored position in which the outside surface of the case forms a continuation of the profile of the body; and

means for releasably holding the case in the recess;

A combination as defined in claim 1, including a second cap threadably on the case, the second cap being threadably mountable on the top opening of the body when the first mentioned cap has been separated from said top opening.
